

1. Axis Overview

Field	Description
Axis Name	Documentation Companion Agent
Strategic Objective	Deliver a standalone AI-powered documentation workspace that turns developer knowledge, browser walkthrough evidence, and reviewed Markdown packages into reusable Coject product guidance.
Business Value	Reduce repeated live developer presentations, improve demo consistency, expose product gaps earlier, and create trusted documentation for product owners, R&D reviewers, and client-facing presentations.
Primary Users	Product development team, Coject R&D team, product owners, presenters
Dependencies	Board Agent demo access, product URL/browser walkthrough capability, Markdown canvas/editor, asset storage, approval workflow, AI interview and structured knowledge services
Executive Owner	[TBD]
Axis Owner	Coject R&D Team

2. Phase Timeline and Status Overview

Category Definitions:

- [PROD]** : Product scope, user journey definition, demo readiness, and product-owner workflow validation.
- [ENG]** : Workspace implementation, persistence, Markdown canvas, versioning, asset handling, and integration delivery.
- [AI]** : Agent interview behavior, structured knowledge model, guide generation, browser observation, and red-flag reasoning.
- [QA]** : Automated tests, manual smoke validation, evidence review, and acceptance packaging.
- [GOV]** : R&D review, approval ownership, readonly enforcement, and release sign-off control.

Phase	Category	Name	Start Date	End Date	Current State
Phase 0	[PROD][AI]	Product Scope and Documentation Model	[TBD]	[TBD]	☐ Not Started
Phase 1	[ENG]	Workspace Shell and Session Foundation	[TBD]	[TBD]	☐ Not Started
Phase 2	[AI][ENG]	Interview, Markdown, and Knowledge Sync	[TBD]	[TBD]	☐ Not Started
Phase 3	[AI][ENG]	Browser Walkthrough and Evidence Capture	[TBD]	[TBD]	☐ Not Started
Phase 4	[ENG][GOV]	Versioning, Assets, and Approval Workflow	[TBD]	[TBD]	☐ Not Started
Phase 5	[QA][GOV]	Board Agent Demo Validation and Release Readiness	[TBD]	[TBD]	☐ Not Started

Status Legend: ☐ Not Started ·  In Progress ·  Completed ·  Blocked

3. Phase Planned Product Achievements

Phase	Planned Product Achievement
Phase 0	v1.00 scope, Board Agent demo boundaries, guide template, documentation state model, and structured knowledge contract are finalized.
Phase 1	Developers can create a documentation session and work in a split-screen chat plus Markdown canvas workspace.
Phase 2	The agent can conduct targeted interviews, challenge vague answers, update structured knowledge, generate Markdown, and stay synchronized with direct canvas edits.
Phase 3	The agent can open a product URL, perform instructed browser walkthrough actions, capture observed behavior, and record mismatches or gaps.
Phase 4	Versioned documentation packages, stable asset references, completion states, R&D approval, readonly approved versions, and new draft creation are implemented.
Phase 5	Board Agent demo flow, automated baseline, manual smoke evidence, and release acceptance package are completed for v1.00 sign-off.

4. Current Release Scope

Item	Details
Release Version	v1.00
Release Status	☐ Not Started
Release Start Date	[TBD]
Target Release Date	[TBD]

Terminology and Roles

Acronym	Meaning
PROD	Product Management
ENG	Engineering Team
AI	AI Agent / Automation Engineering
QA	Quality Assurance Team
RND	Coject R&D Review Team

Included Features

PROD Capabilities / Responsibilities

- Confirm Board Agent as the first demo product and define the minimum workflow that must be documented.
- Validate product-owner self-service expectations and the 95% intended workflow coverage target.
- Confirm in-scope and out-of-scope documentation outputs for v1.00.

ENG Capabilities / Responsibilities

- Build the standalone documentation workspace with product/feature setup, session persistence, and split-screen layout.
- Implement Markdown canvas editing, versioned documentation packages, metadata, stable asset references, and readonly approved versions.
- Implement document state transitions from Draft through Approved, Superseded, and Archived.

AI Capabilities / Responsibilities

- Implement the developer interview flow, follow-up questioning, skipped-answer tracking, and red-flag generation.
- Maintain structured knowledge as the source of truth and generate Markdown guide sections from that structure.
- Implement browser walkthrough observation, evidence capture, behavior comparison, and follow-up prompts for unclear observations.

QA Capabilities / Responsibilities

- Validate external behavior through unit, integration, and manual smoke checks.
- Confirm chat updates, direct Markdown edits, browser evidence, red flags, asset links, and approval behavior work as specified.
- Package traceable acceptance evidence for Board Agent demo readiness.

RND Capabilities / Responsibilities

- Own completion review, approval, and release sign-off for trusted documentation.
- Confirm approved documents are readonly and post-approval changes create new draft versions.
- Decide whether unresolved red flags block approval or are accepted as known limitations.

Out of Scope

- Arabic documentation generation.
 - Multilingual documentation generation.
 - Public documentation publishing portal.
 - Advanced permission model beyond R&D approval.
 - Automatic video generation.
 - Deep codebase analysis as a dependency for v1.00.
 - Complex multi-product documentation portal.
 - Board/Card lifecycle integration.
 - Full documentation analytics.
 - Multiple export formats beyond Markdown.
-

5. Assumptions

ID	Assumption	Impact if Incorrect	Owner
A-01	Board Agent is available as the first demo product with enough access to document its main workflow.	v1.00 demo validation may be blocked or reduced to a partial documentation flow.	PROD
A-02	The team can provide product URL access or equivalent browser walkthrough access when evidence capture is required.	Browser evidence and observed-behavior comparison may be incomplete.	ENG
A-03	English-only Markdown output is acceptable for the first release.	Scope expands and delivery may require localization design before v1.00 can close.	PROD
A-04	Coject R&D Team remains the approval owner for v1.00 documentation packages.	Governance, readonly rules, and sign-off flow may need redesign.	RND
A-05	Structured knowledge can be persisted separately from generated Markdown.	Chat/canvas synchronization and reliable regeneration may become fragile.	AI

6. RACI Matrix

RACI Legend:

- **R** = Responsible
- **A** = Accountable
- **C** = Consulted
- **I** = Informed

RACI Rule:

- Each workstream row must contain exactly one **A**.
- Multiple **R** values are allowed.

Workstream / Deliverable	PROD	ENG	AI	QA	RND
Phase 0 Product Scope and Documentation Model	A	C	R	C	C
Phase 1 Workspace Shell and Session Foundation	C	A	C	R	I
Phase 2 Interview, Markdown, and Knowledge Sync	C	R	A	R	I
Phase 3 Browser Walkthrough and Evidence Capture	C	R	A	R	I
Phase 4 Versioning, Assets, and Approval Workflow	C	A	R	R	C
Phase 5 Board Agent Demo Validation and Release Readiness	C	R	R	A	R
R&D Approval and Release Sign-off	C	R	C	R	A

7. Acceptance Criteria

The release is considered accepted when:

Phase Exit Criteria

Phase 0 [PROD][AI] - Product Scope and Documentation Model

- ☐ [] Board Agent demo scope and minimum documented workflow are confirmed.
- ☐ [] Required guide template sections are finalized and mapped to structured knowledge fields.
- ☐ [] Document states and approval ownership are confirmed.

Phase 1 [ENG] - Workspace Shell and Session Foundation

- ☐ [] A developer can create a documentation session with product, feature, audience, language, and product URL.
- ☐ [] The workspace displays chat and live Markdown canvas side by side.
- ☐ [] Session state starts as Draft and persists guide, metadata, questions, assets, and approval context.

Phase 2 [AI][ENG] - Interview, Markdown, and Knowledge Sync

- ☐ [] The agent asks targeted questions about purpose, users, roles, permissions, navigation, workflows, errors, limitations, and demo needs.
- ☐ [] Vague, skipped, or unknown answers are captured as unresolved items or red flags.
- ☐ [] Chat-driven updates and direct Markdown edits remain synchronized in later agent context.

Phase 3 [AI][ENG] - Browser Walkthrough and Evidence Capture

- ☐ [] The agent can open the configured product URL when access is available.
- ☐ [] Browser walkthrough evidence records screens visited, actions performed, labels, controls, validation messages, and asset references.
- ☐ [] Mismatches between developer explanation and observed behavior are added to Product Gaps / Red Flags.

Phase 4 [ENG][GOV] - Versioning, Assets, and Approval Workflow

- ☐ [] Generated documentation is stored as a versioned package with guide, assets, and metadata.
- ☐ [] A developer can explicitly mark a document complete and send it for R&D review.
- ☐ [] Approved documents are readonly, and post-approval modifications create a new draft version.

Phase 5 [QA][GOV] - Board Agent Demo Validation and Release Readiness

- ☐ [] Board Agent guide is produced from developer interview plus browser walkthrough evidence.
- ☐ [] Automated and manual smoke validation evidence is complete for chat, canvas, browser evidence, red flags, assets, versioning, and approval.
- ☐ [] Coject R&D approval and release sign-off are documented.

Release-Level Acceptance Checks

- ☐ [] All v1.00 PRD functional requirements are covered by implementation, test evidence, or explicitly accepted limitations.
- ☐ [] Product owner can use the generated Board Agent guide and assets for approximately 95% self-service workflow completion.
- ☐ [] No blocker defects remain open for the Board Agent demo scenario.
- ☐ [] Executive and R&D approval are documented before release closure.

8. Definition of Done (DoD)

- v1.00 scope is implemented according to the PRD and this plan.
- Required companion docs are available or explicitly tracked as follow-up deliverables.
- Automated tests, manual smoke checks, and Board Agent demo validation evidence are complete.
- Versioned documentation package behavior is verified end to end.
- Approval, readonly enforcement, and new draft creation after approval are verified.

Governance Rule

Documentation packages, approval state, and published guide versions are governed product artifacts, not free-form drafts. Every approval, supersede, archive, or post-approval structural change requires the axis-defined accountable owner approval.

9. Next Release Vision

Item	Description
Next Release Version	v1.x
Primary Goal	Expand Documentation Companion Agent beyond the Board Agent demo into reusable multi-product documentation workflows.
Candidate Features	Arabic and multilingual documentation, public publishing portal, advanced reviewer permissions, documentation analytics, additional export formats, broader product portfolio support.
Excluded Features	Changes that bypass R&D approval, weaken evidence traceability, or break v1.00 versioned package compatibility without governance approval.

10. Notes and Follow-ups

- Confirm named executive owner and update the Axis Overview before release kickoff.
- Finalize phase dates in `DD-MM-YYYY` format when the execution timeline is approved.
- Resolve the PRD open questions for identity/authorization, storage location, Markdown edit persistence strategy, browser automation environment, minimum Board Agent workflow, named R&D approver, and repository export behavior.
- Create the required companion documents listed in the PRD before v1.00 release closure.

Rule: A release cannot be closed unless acceptance criteria are met and executive approval is documented.
